Installer

Simple, low cost panel access for set-up and configuration

The panel can be accessed and configured through any network connected device such as a netbook, iPod touch or iPhone, the configuration software runs on all current operating systems running any of the popular web browsers

Always work on the latest version of the panel configuration

The panel profile and configuration software are stored in the panel, who-ever accesses the panel to work on it is sure they are working on the latest software. Configurations can be saved and back up copies saved but the master sits on the panel

No need to worry about having the latest configuration software

Connect with confidence, the panel configuration software is held on the panel so you will never arrive on site with an old version of the software

Easy connection to the panel

Connect via the new Ethernet port for advanced functionality or via USB for traditional downloader services

End User

Easy end user panel access

End users can access the panel over their local network and easily perform basic functions such as:

- Set and unset the system
- Change, add or delete user codes
- View the log on a large format screen rather than on the two line keypad display

Wireless touch screen keypad

Do your customers want a wireless touch screen keypad, now every web enabled smartphone, PDA or netbook can offer them a remote wireless interface.

With the online virtual keypad you or your customer can perform any function available to them from a standard keypad
